

TCI-130°

THE REAR LOADING BIN WASHER FOR A HIGH QUALITY OF WASHING

TCI-130°: THE NEW DESIGN OF REAR LOADING

The new bin washers with SLOPED rear loading, born from long years of study and experience in the field finally allow a better quality of washing at the most critical and visible part of the bin:

the upper part.

TECME, thanks to the experience gained by its customers, has made a machine that allows thorough washing precisely where users are more sensitive: **THE EDGE AND THE COVER.**

TCI 130 PROVIDES A HIGHER QUALITY OF WASHING IN THE MOST DIFFICULT POINTS OF THE BIN: THE UPPER EDGE AND THE INSIDE COVER. USERS WILL BE PLEASANTLY SURPRISED BECAUSE THEY WILL FIND A CLEAN CONTAINER EVEN IN SURFACES WITH WHICH THEY WILL BE IN CONTACT!

The new way of washing is born from the sophisticated but reliable technology applied to the **patented** washing robot.

The combination of 3 different degrees of freedom of the robot allows to easily reach the most sensitive points of the bin.

The sequence of movements designed by our technicians together with the great experience of our customers has allowed a considerable improvement in the quality of washing.

The binlifter, consolidated by years of continual improvements, is now realized in the standard version in stainless steel.

THE BINLIFTER IS FLUSH WITH THE REAR OF THE MACHINE

This means that the equipment can travel with the binlifter open, significantly reducing the loading time.

The two operators are provided with comfortable space in the large footboards on the rear.

MAIN FEATURES:

Clean water tank: 4000 to 9000 Lt

Loadable bins: 60 to 1100 Lt

Fitting on chassis: 7.5 t up to 24 t

MAIN OPTIONS:

Hot Water

Vertical sliding external washing

Pneumatic drives inside the washing chamber

THE PARTICULAR SHAPE OF THE WASHING CHAMBER ALLOWS A FAST LOADING OF THE BIN, LEAVING AN UNPRECEDENTED SPACE FOR THE POSITIONING OF THE COVER INSIDE THE CHAMBER. THIS IS THE SECRET OF A BETTER WASHING OF THE UPPER PART OF THE BIN

As usual, the machine is rich in options that the customer can choose and combine. You can choose from different configurations of the washing cycle, of the binlifter and of the washing chamber.

We have designed a machine that is practical also at the time of maintenance. All the systems are on the sides of the machine, easily accessible. To enter the washing chamber we have realized a watertight door on the right hand side.

In the cab, all the controls and adjustments of the machine are available on a touch-screen for easy and immediate use.
