

TEC-SIDE

SIDE LOADING BIN WASHERS

TECME PRESENTS THE SIDE LOADING BIN WASHER

TEC-SIDE FAST, VERSATILE AND COMPLETE:

- Cold water flow up to 100 L/min, hot water up to 60 L/min;
- Bin collection system with DIN and Bologna coupling (changing the coupling pins);
- System for external washings, sliding or with brushes, also with several high-pressure pumps;
- 5,000 +5.000 to +10,000 10,000 litres tank.
- Bin coupling up to 2 meters away.
- ECANBUS electronics with diagnostics.

The accurate design phase has allowed us to build a machine with very limited overall dimensions and height.

Our system for bin coupling in rest position positions with the outer arms on the washing chamber, ready for coupling. In this way, no time is wasted for tailgate opening and for arms exit from the washing chamber.

THE SIDE LOADING EQUIPMENT **TEC-SIDE** IS PART OF THE WIDE RANGE OF BIN WASHING MACHINES OFFERED BY TECME.

As always we are recognizable in the market for the quality of the product, for the convenience in use, the attention to details and for the customer service which means: answers in a short time, maximum care in service, studies designed to meet specific customer requests, maximum attention to continuous product improvement.

The collection tank and the structure of the washing chamber are made of stainless steel AISI/304, the binlifter on request is made of stainless steel. The closing door of the washing tank moves in synchrony with the loading system in such a way as not to affect the time of the wash cycle. The specific locking system of the washing chamber offers a locking system that limits as much as possible unwanted water leaks during transfers.

The commands for machine control and management are simple, reliable, and intuitive: The control panel, with the monitor equipped with an anti-reflection and brightness and contrast adjustment, is ergonomically located in the cab, so as not to compromise in any way the visibility and the driving movements of the driver. The bin washing and collection equipment is fully automatic, electronically managed by a programmable controller system, and equipped with check control for diagnostics of operation of the various parts of the equipment.

The loading system on the left or right side of the vehicle performs coupling, handling, washing and repositioning of 1000 to 1100 LT bins with Din, Bologna and OMB couplings

THE OPERATOR HAS A FULLY CUSTOMIZABLE MACHINE, AT THE SAME TIME PRACTICAL, FAST AND ACCURATE!

The panel, with touch screen functionality, allows the total control of job settings, speed of movement and parametrization of the size of the types of bins, check of the state of the sensors, including analogue ones. The panel has a 4 characters password protection for the sensitive operations of the operator panel.
